

# NURSING INFORMATICS

## *Job Titles*

Nursing Informatics is a relatively young specialty. Because of that and other factors, standardization of job titles in the specialty has not yet been established. What is called a "Clinical Informatics Analyst" in one facility might perform a very similar job function as an "Application Analyst" in another facility. There are also many Informatics Nurse job titles that don't have the word "Informatics" and/or "Nurse" in it.

Below is a curated list of job titles, collected over a period of ten years, whose job descriptions indicate that they may be performed by an Informatics Nurse. This is not a comprehensive list, as new or slightly different job titles come up from time to time.

Note that some of them, such as "Application Analyst", may also be performed by a non-nurse. Make sure to read and understand the details of the job description when applying for all the jobs in this list.

An asterisk (\*) next to a job title means that some of these job openings provided an opportunity for remote work or telework/telecommute.

1. Application Analyst\*
2. Application Coordinator\*
3. Application Manager\*
4. Clinical Informatics Analyst\*
